BUILD AUTOMATION AND VERIFICATION FOR MODULAR SERVERS

ABSTRACT OF THE DISCLOSURE

A system and method for managing and verifying the installation of software on a modular information handling system includes a bar file database and an installation management module. The bar file database stores bar files. The bar files each are related to a component of a modular information handling system. The installation management module is able to receive a bar file and communicate with the bar file database to identify and access each bar file associated with the modular information handling system.
